Optimizing Sorting Processes for Second-Hand Clothing

This project aims to enhance and adapt textile sorting processes for second-hand clothing to maximize reuse and create more opportunities for employment within the social economy. Our goal is to build a collaborative ecosystem by partnering with social workshops and working closely with large recycling companies to ensure a sustainable and impactful approach to textile recycling.

OBJECTIVES

1. Set up an ergonimic sorting system to increase textile reuse by at least 10%
2. Research and test different technoligies and look at their economic feasibility
3. Launch new activities that generate additional employment for people from disadvantaged groups
4. Build an ecosystem within for the entire social sector and industry to transition to a new economy that benefits all
